

SOUND STABILISER - JACK-UP PLATFORM

SOUND STABILISER is a fully hydraulic multi-purpose, four legged jack-up platform completely operational from an enclosed jacking house requiring only one man. The platform can be elevated out of the water and made completely independent from vulnerable inclement weather and tidal conditions.

The SOUND STABILISER jack-up is an ideal craft capable of working safely in both confined inter-tidal areas and exposed open seas, where swift, accurate manoeuvring and positioning is required.

Traditional methods of working in a marine environment usually involves the use of floating plant such as ships and barges however this method is susceptible to bad weather.

The use of a jack-up platform permits work to be carried out in similar conditions to those on land, specific benefits when using a jack-up platform compared to more traditional methods are: speed of operation, elimination/reduced downtime due to adverse weather, better quality of work for example drilling works, improved working and safety conditions and minimum interference to other marine traffic.

The introduction of a static platform further permits modern sophisticated techniques for marine testing such as cone penetration testing of the seabed etc. Based on the above it can therefore be established that the SOUND STABILISER is an ideal platform for the use in all near shore working environments, enabling, for example the deployment of heavy equipment for drilling, piling and lifting etc.

SOUND STABILISER has a rapid deck elevating system and is equipped with four legs mounted internally to provide maximum stability.

For maximum safety, rigid steel bulk works surround the deck, while 220V fluorescent lights provide full inboard and outboard illumination for 24 hour working. The jack-up can be equipped with working crane, a moon pool for vertical drill holes, 4 anchor winches, VHF radios, life saving and first aid equipment.

Operated and maintained exclusively by trained and experienced our marine engineers, the SOUND STABILISER jack-up offers a versatile, stable and self-elevating platform for all types of over-water work.

Technical Specifications

Length/Breadth	20,0 /12,0 m
Deck area (Working Area)	200,0 m²
Working draft	2,0 m
Draft	3,0 m
Leg size	1000mm diameter x 32m
Payload (evenly distributed)	In harbour 80 ton, at sea 40 ton
Power Supply	380 volts AC Gen
Elevating system	hydraulic ram and duo pin rack
Accommodation	workshop / operators room
Mobile 25 ton Crane	Optional
Anchor Winches	4 No. hydraulic, optional
